Heavy Menstrual Bleeding (HMB) is usually a subjective symptom, related to a woman’s perception of "normal" or acceptable menstrual bleeding. This heavy bleeding is regular and may be very obvious on history taking but in many cases this new level complained of may not be heavy menstrual bleeding. It is recommended that a pictorial chart be kept for 3 months to give a semi-objective assessment. Irregular bleeding although it may be heavy is not included in this definition. Associated features are also relevant in planning management.

### ALL PATIENTS WITH HEAVY MENSTRUAL BLEEDING

| All Patients | Give patient information leaflet | Pictorial bleeding assessment if appropriate |

### CLINICAL RISK FACTORS IN ADDITION TO HEAVY MENSTRUAL BLEEDING

- **weight > or = 90kg**
- **age > or = 45 years**
- **infertility + nulliparity**
- **hereditary nonpolyposis colorectal cancer**
- **family history of endometrial carcinoma**
- **exposure to unopposed oestrogen or tamoxifen**
- **Hb < 80 g/l**
- **Irregular or intermenstrual bleeding**
- **Abnormal pelvic or abdominal examination**
- **Abnormal endometrium on pipelle biopsy**
- **Inadequate response to medical treatment**

### TVU scan endometrial thickness ≥ 12mm

| Perform pipelle endometrial biopsy 2 | Proforma referral |

### DESIRE FOR REDUCED HEAVY MENSTRUAL BLEEDING AND

- **Desire for reduced HMB and cycle regularity**
  - Oral progestogens 5mg three times daily (days 5-25)
- **Desire for reduced HMB and any of: cycle regularity, contraception, treating dysmenorrhoea, treating PMS**
  - Oral contraceptive pill
  - Prescribe (local preferred Rx)
- **Desire for reduced HMB and contraception and/or treating dysmenorrhoea**
  - MIRENA (levonorgestrel intrauterine system)
  - Refer to Gynaecologist or Family Planning Clinic
- **Desire for reduced HMB and treating dysmenorrhoea and/or headaches**
  - NSAID (24–48 hrs before and during heaviest bleeding days)
  - Prescribe (local preferred Rx)
- **Desire for reduced HMB with non-hormonal therapy**
  - Tranexamic acid - 1g three times daily (during heaviest bleeding days)

### OTHER

- **History of other abnormal bleeding sites**
  - Tests for coagulopathy
  - See "Bleeding Disorders" 4
- **Iron deficiency**
  - Iron replacement

---

**SEE NOTES ON REVERSE >>>**
**Heavy Menstrual Bleeding**

**NOTES:**

1. Hereditary nonpolyposis colorectal cancer (HNPCC) is a disease characterised by the early onset of colorectal cancer and by other non-GI malignancies such as endometrial and renal cell carcinoma.
2. Only if experienced in technique. If pipelle fails to sample sufficient tissue, refer to specialist.
3. Definition of irregular bleeding - bleeding persisting for 6 months despite hormone treatment with no abnormality noted on examination.

**REFERRAL LETTER INFORMATION**

Indication for referral, response to therapy, menstrual history, obstetric history, pelvic examination/smear result, full blood count, TVU and/or pipelle results if done, bleeding assessment chart if appropriate, all current medications and treatment, allergies.

This management guideline has been prepared to provide general guidance with respect to a specific clinical condition. It should be used only as an aid for clinical decision making and in conjunction with other information available. The material has been assembled by a group of primary care practitioners and specialists in the field. Where evidence based information is available, it has been utilised by the group. In the absence of evidence based information, the guideline consists of a consensus view of current, generally accepted clinical practice.
